Public Service Network Testing

What is it?

The PSN network (Public Services Network) joins Local Authorities and selected organizations to Central Government departments to allow effective access to government data and services.

Our PSN Health check service is designed to quickly, efficiently and cost-effectively help you remain compliant and identify any vulnerabilities that would result in your PSN application being rejected.

Techpro Global Ghana's Solution

Our PSN IT Health Check package

- External network penetration test
- Onsite network penetration test

- Password file cracking
- Authenticated vulnerability assessment
- Onsite wireless test
- Firewall / router / core switch configuration review
- PSN Ruleset Review
- VPN assessment
- Mobile device assessment

PSN Testing

A qualified team of experts

If your organization is operating within the Public Service Network then you'll have a requirement for an annual IT health check as part of the 'Connection Code of Conduct' (CoCo) guidelines.

As part of this annual submission, an up-to-date Penetration Testing report needs to be provided. The conditions of this report include:

- Conducted by an accredited CHECK or CREST organization
- Certain areas of the network and IT systems must be tested

If the test has not been done correctly or has not been done by an accredited CHECK or CREST company then the report will be rejected.
